

Example: Standard Basis of

Example: Standard Basis of

The standard basis of \mathbb{R}^n is the most fundamental example of a [Basis](#) for a [Vector Space](#).

Definition

The standard basis of \mathbb{R}^n consists of the vectors: - $e_1 = (1, 0, 0, \dots, 0)$ - $e_2 = (0, 1, 0, \dots, 0)$ - $e_3 = (0, 0, 1, \dots, 0)$ - \vdots - $e_n = (0, 0, 0, \dots, 1)$

where e_i has a 1 in the i -th position and 0s elsewhere.

Verification as a Basis

To show that $\{e_1, e_2, \dots, e_n\}$ is a basis, we verify:

1. Linear Independence

The vectors are [Linear Independence](#). If $c_1 e_1 + c_2 e_2 + \dots + c_n e_n = 0$, then:

$$(c_1, c_2, \dots, c_n) = (0, 0, \dots, 0)$$

This implies $c_1 = c_2 = \dots = c_n = 0$.

2. Spanning

The vectors [Span](#) all of \mathbb{R}^n . Any vector $(x_1, x_2, \dots, x_n) \in \mathbb{R}^n$ can be written as:

$$(x_1, x_2, \dots, x_n) = x_1 e_1 + x_2 e_2 + \dots + x_n e_n$$

Special Cases

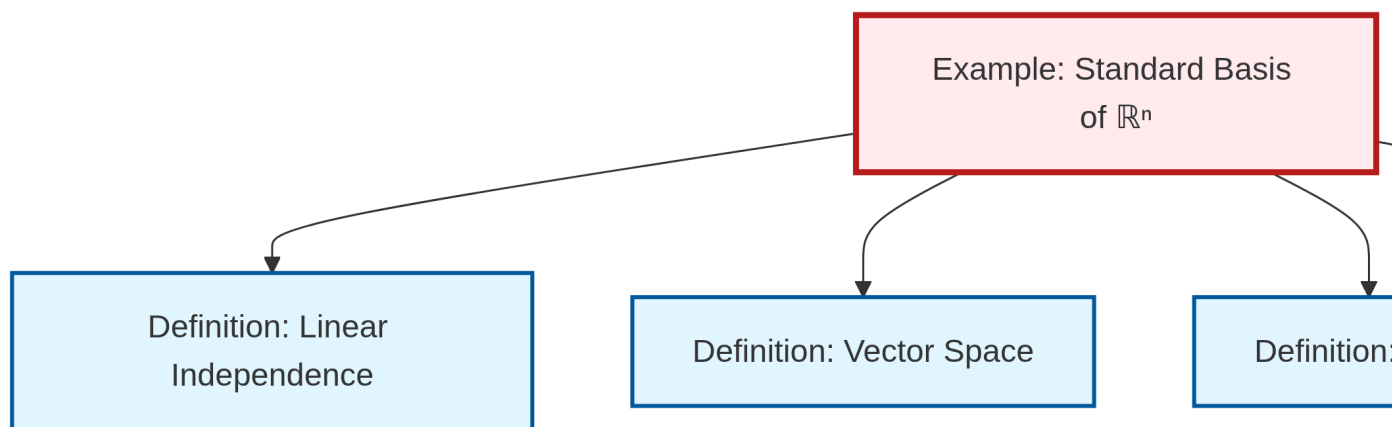

- $n = 2$: The standard basis of \mathbb{R}^2 is $\{(1, 0), (0, 1)\}$ - the familiar unit vectors along the x and y axes
- $n = 3$: The standard basis of \mathbb{R}^3 is $\{(1, 0, 0), (0, 1, 0), (0, 0, 1)\}$ - often denoted $\{\mathbf{i}, \mathbf{j}, \mathbf{k}\}$ in physics

Properties

- The standard basis is **orthonormal** with respect to the standard inner product
- Any vector's coordinates in the standard basis are simply its components
- The matrix of any linear transformation in the standard basis is particularly simple to compute
