Theorem: Field Characteristic

Theorem: Field Characteristic

Every Field has characteristic either 0 or a Prime Number number.

Definitions

The **characteristic** of a field F, denoted char(F), is the smallest positive integer n such that:

$$\underbrace{1+1+\ldots+1}_{n \text{ times}} = 0$$

If no such n exists, we say char(F) = 0.

Statement

For any field F: 1. If $\operatorname{char}(F) \neq 0$, then $\operatorname{char}(F) = p$ for some prime p 2. If $\operatorname{char}(F) = 0$, then F contains a copy of \mathbb{Q} 3. If $\operatorname{char}(F) = p$, then F contains a copy of \mathbb{F}_p

Proof Sketch

Suppose char(F) = n > 0. If n = ab with 1 < a, b < n, then:

$$(a \cdot 1)(b \cdot 1) = (ab) \cdot 1 = n \cdot 1 = 0$$

Since fields have no zero divisors, either $a \cdot 1 = 0$ or $b \cdot 1 = 0$, contradicting the minimality of n. Therefore n must be prime.

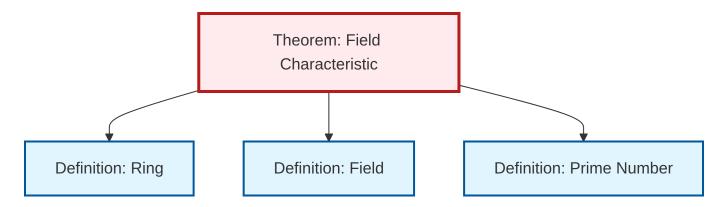

Examples

- $\operatorname{char}(\mathbb{Q}) = 0$, $\operatorname{char}(\mathbb{R}) = 0$, $\operatorname{char}(\mathbb{C}) = 0$
- $\operatorname{char}(\mathbb{F}_p) = p$ for any prime p
- $\operatorname{char}(\hat{GF}(p^n)) = p$ for any prime power p^n

Consequences

- In characteristic p: $(a+b)^p = a^p + b^p$ (Freshman's Dream)
- The Frobenius map $x \mapsto x^p$ is a field homomorphism in characteristic p
